

The LS3008 rugged handheld scanner has a lightweight ergonomic design for superior productivity in light industrial, healthcare and retail environments. Designed to deliver maximum reliability and uptime, the single-board construction eliminates multiple circuit boards and connecting ribbon cables — the most common point of failure in scanners. A multi-line rastering scan pattern eliminates the need for exact aim and positioning and a wide working range allows easy scanning. Liquid Polymer Scan Technology eliminates friction and wear, and superior motion tolerance reduces fatigue and increases productivity.
